

Your Rhythm Monitor

Why this test?

A patch, Holter or event monitor records your rhythm during daily life, helping compare symptoms with heartbeats.

While wearing it

Follow the instructions for your exact device, including showering, activity and return shipping. Log symptoms and their times; press the event button if instructed.

Words in the report

PACs and PVCs are early beats from the upper or lower chambers. Burden describes how often a finding occurs. Duration, symptoms and heart structure affect what a rhythm finding means.

What happens next?

Return the device as directed and ask when results will be reviewed. Some devices are read after return. Do not assume your monitor is watched continuously or that an event button requests emergency help.

Questions to bring

- What question is this monitor meant to answer?
- How do I log symptoms and return my device?
- Which findings matter, and when will we review the results?

My next step / follow-up: _____

Urgent symptoms: Call 911 for severe chest symptoms, fainting, stroke symptoms or severe trouble breathing. Do not wait for a scheduled test or its report.
